

## Di Goodwin: Past Projects

### Court Reporter Stand

A court reporter had carpal tunnel and neck and shoulder pain from needing to hold a static position for 7 hours a day. The state had purchased an ergonomic chair, but he could not make use of the adjustments because the stenography machine was mounted on a floor stand. The machine was mounted to his chair, so he could make use of the arm supports and the tilt mechanism of the chair. The holder was made from drum and cymbal hardware. An adjustable friction mechanism allowed him to adjust it so it would hold it in position, yet he could easily move it out of the way.
